Legal

Office Automation Tools 2007
Automated documentation products

Works with:
SQL Server 2008® Enterprise Edition

Technology areas:

- Microsoft® Office

Microsoft® SQL Server 2008®

Launched in August 2008, Microsoft® SQL Server® 2008 has generated overwhelming customer and partner excitement. With over 1.5 million downloads to-date, more than 2,500 partners use this platform to deliver their solutions.

Regarded as a critical component of Microsoft's acclaimed business intelligence platform, SQL Server 2008 has received industry recognition and is now considered the fastest-growing relational database in the world.

To find out how you can use SQL Server 2008 to deliver your solutions, go to <http://www.microsoft.com/sqlserver/2008/en/us/default.aspx>

For business and legal firms, improving productivity and operational efficiency is as important as reducing costs. To take advantage of a variety of improved productivity tools and enhanced security features, they need their IT departments to update business critical applications promptly. They also need to be able to quickly and easily create consistent, enterprise-wide branded documentation – yet eliminate the tedious, and often time-consuming, task of repetitive formatting and layout.

Document automation can help you develop consistent enterprise-wide documentation and reduce IT administration. This enables you to reinforce your corporate identity and empower your employees with software that enables them to work more efficiently and effectively.

“KI Systems supports SQL Server 2008 because it allows our customers to deploy applications on a platform which provides the highest levels of security, reliability, and scalability for business-critical applications.”

—Kristi LeaMaster, President, KI Systems, Inc

KI Systems, Inc. is a leader in Microsoft Office automation software for business and legal firms. Our Office Automation Tools 2007 application provides a fully customized document production process, coupled with a unified contact management system.

Office Automation Tools 2007 delivers high-end, customizable document production templates and macros for business correspondence and multi-jurisdiction litigation practices. It also provides a multi-user shareable contact database, based on SQL Server 2008, that reduces data entry and maintenance costs. Our comprehensive document automation solution features document management system and email integration, and helps streamline the distribution and management of desktop systems.

We'll work with you to create and customize solutions that increase productivity, reduce costs, minimize administration – and help you capitalize on your existing Microsoft products.

“Microsoft remains committed to the success of our broad ISV partner community who drive innovative solutions to market,” said Mark Jewett, director of SQL Server marketing at Microsoft Corp. “SQL Server 2008 is revolutionizing database development with enhancements such as relational database support and consistent query syntax across programming languages. SQL Server 2008 combined with powerful ISV partner solutions, enables developers to access and manipulate business-critical data from a variety of diverse devices, platforms and data services across the enterprise.”
